Education

Pandit Deendayal Energy University

B.Tech in Information and Communication Technology (Current CGPA: 8.52/10)

July 2024 – Present

Gandhinagar, Gujarat

Atmiya University

Diploma in Computer Engineering (CGPA: 8.87/10)

September 2021 – June 2024

Rajkot, Gujarat

Work Experience

Clarivis Intelligence

AI Engineer Intern (Hybrid)

May 2026 – July 2026

Rajkot, Gujarat

- Built internal tools and websites using the **Anthropic API** and **Claude Code** to support consulting operations.
- Developed AI-assisted prototypes and workflows that streamlined day-to-day operational tasks across the team.

LNx Cloud Technologies

Python Developer Intern

May 2023 – June 2023

Rajkot, Gujarat

- Contributed to **Python** application features and **Django** (models, views, routing); participated in code reviews and debugging sessions aligned with industry development standards.

Technical Skills

Languages: Python, Java, MATLAB

Backend and Databases: FastAPI, PostgreSQL, MySQL

Frameworks and Libraries: NumPy, Pandas, Scikit-Learn, LangChain, Pinecone, Anthropic API

Developer Tools: Git, GitHub, Postman, Docker, n8n

Fundamentals: OOP, DBMS, RESTful APIs, LLM Integration, Workflow Automation

Projects

Minutely – AI-Powered Meeting Intelligence

[🐙 GitHub](#)

- Built a full-stack tool that ingests meeting transcripts (**CSV / PDF / DOCX / TXT / MD**) and context documents, returning a structured PDF with action items, decisions, risks, key dates, and per-participant summaries.
- Integrated the **Anthropic Claude API** using `tool_use` for schema-enforced structured output, with **Pydantic** validation and prompt caching to cut token cost and latency on repeated runs.
- Engineered a stateless **FastAPI** backend with in-memory **ReportLab** PDF rendering and modular multi-format parsers, paired with a web front end for input/output; containerized with **Docker** and deployed on Railway.

Customer Insight Triage System (CITS)

[Live Demo](#) | [🐙 GitHub](#)

- Built an NLP-based system to detect and prioritize high-urgency customer reviews using TF-IDF and supervised ML models.
- Developed an end-to-end pipeline covering preprocessing, feature engineering, model evaluation (Precision, Recall, F1), and deployment.
- Designed a dynamic weighted keyword scoring mechanism to rank complaint severity and adapt to evolving customer language.

Hackathons and Workshops

Code with Cisco '26

National Hackathon - Top 75 Finalist (India) - Cisco Campus

- Selected among the top 75 students nationally to compete on-site at Cisco's campus finals.
- Led problem-solving design and technical direction for the team's build during the final round.

Advanced Large Language Models & RAG Workshop

PDEU Campus

- Built a **mini Transformer from scratch** (tokenization, embeddings, self-attention, full transformer blocks) and shipped a memory-enabled chatbot plus a **PDF-based RAG system** using LangChain and Pinecone.
- Practiced chunking strategies, embedding pipelines, retriever design, grounding rules, and debugging real-world RAG failures end-to-end.

HackOut'25 – DAIICT

Hackathon

- Designed the end-to-end workflow for a blockchain-based NFT marketplace trading Green Hydrogen Credits – smart-contract-driven minting logic and role-based verification flow – and directed the team's build.
- Full-stack delivery across **Solidity, Node.js, PostgreSQL, and React**, containerized with Docker for deployment.

HackNUthon'25

Hackathon — 6th Place / 100+ Teams

- Designed the architecture for a multi-chain Chrome wallet (Ethereum + Polygon testnets) – password protection, seed-phrase flows, and multi-wallet/balance-tracking structure.
- Directed implementation using **ethers.js** and a modular React front end, optimized for extension deployment.
